Skype:iwugod3

I have an accumulated average of four years proficient experience in User Interface applications and integration of highly transactional and scalable application, I am a self-thought frontend developer with professional working experience, based in Mauritius. I have learnt that aesthetics and intuitive designs are timeless and great if given proper attention and time. From participating in many projects, seminars and workshops, I have learnt that high coding standards and best practices are critical for both short and long-term success of a project. I attained the following essential attributes; Team work, open communication and compassion that hamper or contribute to productivity. In conclusion, humility, adaptability and curiosity are the essential tools required to stay relevant in the ever-changing world of Information Technology.

EDUCATION

MS	MSc Enterprise Security and Digital Forensics University of Technology Mauritius	2016
BS	Information Technology and Business Information Systems Middlesex University London	2014
ADSE	Advance Diploma in Software Engineering, ISO9001 Aptech Computer Education	2013

RELEVANT PROJECTS/DESCRIPTION/TECHNOLOGIES

Aunsbjerg:
- Participated in the development of this site, desktop and mobile designs of certain pages such as the checkout page.
- Integration of backend API on frontend level.

Technology: AngularJs, Bootstrap, Umbraco, Razor, Javascript, HTML5, Sass, CSS3, JQuery, GruntJs.
- **Link :**https://aunsbjerg.com/

Arosv3/ vejlebrandv3:
- Primarily responsible for the development of most products and the checkout pages on this website. The project is for an insurance company in Denmark that sells insurances online.
- Creating pages and responsive templates, writing AngularJs directives to manipulate HTML elements,
- Consume API calls from backend. Test and deploying to Server for onward testing and delivery

Technology: Typescript, Angularjs, Bootstrap, Umbraco CMS, Razor, Javascript, HTML5, Sass, CSS3, JQuery. GruntJs
Link: https://minside.vejlebrand.dk/beregn-pris

Signit:
This system is an online signing engine that aims to convert physical documents into digital format such that the converted document is signed via the sender or owner of the document using their online digital identity.
- Started with the maintenance of previous version of the project.
- Built the checkout module (frontend wise)
- Payment module
- Localization of the web site
- Conversion of UI/UX designs to web pages, validating and testing functionalities according to requirement.

Technology: JQuery, AngularJs, Javascript, Umbraco CMS, Razor, HTML5 Sass, Css3, Grunt
Link: https://signit.dk/

GreenTechBus:

- Converted the PSD designs into responsive template using ReactJs plugin to implement the sliding effect of the website.
- Integrate SEO into the system such that an admin can always change SEO tags and it is automatically populated back into the system.
- Worked with other team members in integrating the Multi lingual model for this site using JSON files stored in AWS S3 server.
- Test project using BackstopJs Technology

ReactJs, Sass, AWS S3, HTML5, GIT
